

OUR EQUIPMENT

We use Piccard's patented Brush-Kart™ system to thoroughly and reliably clean your ship's hull. A leading tool in underwater maintenance, the Brush-Kart™ system can be readily adapted to remove any type of roughness or marine bio-fouling. Its interchangeable brushes also allow for a smooth polish that ensures no damage is done to the paint coat.

WHO WE ARE

Apex Underwater Services comprises a team of qualified divers with over 20 years' experience in ship husbandry and marine construction. Equipped with top-of-the-line tools and machinery, we are committed to providing turnkey solutions customised to suit your unique needs. With safety as our top priority, we provide timely and efficient underwater ship maintenance that is both cost-effective and eco-friendly.

WHAT WE DO

HULL CLEANING

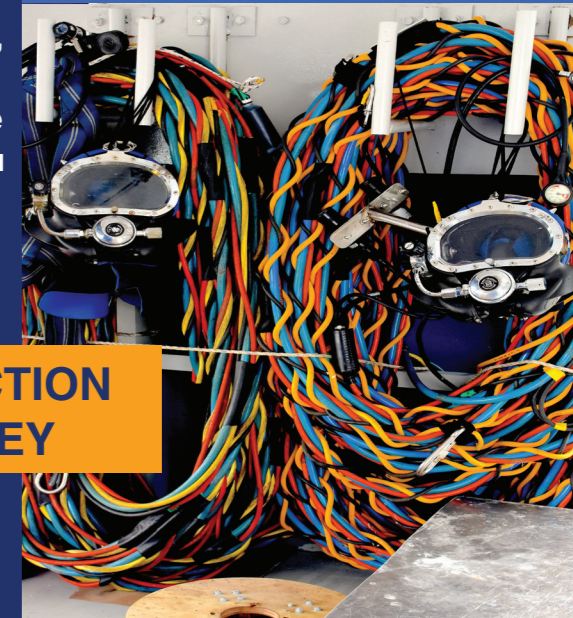

A ship's hydrodynamic performance can be adversely affected by the accumulation of marine detritus. This can not only result in decreased speed and power performance, but an increase in fuel consumption, and hence cost. Regular cleaning of the hull can prevent fouling as well as the spread of potentially invasive species. Through the use of our tried-and-tested cleaning systems, we can ensure a thorough clean, with no damage done to the paint work.

We provide quick and detailed assessments of your ship's hull, evaluating its condition beneath the waterline and immediately highlighting areas of concern. A comprehensive report with the necessary photographic evidence will be made available to you within hours.

We provide the following types of hull inspection:

- In-water Survey
- UWILD
- Sales & purchase inspection
- Sea-bed inspection
- Damage inspection
- Extension of dry dock survey
- Invasive Marine Species (IMS) survey

HULL INSPECTION AND SURVEY

PROPELLER POLISHING

Routinely polishing and reconditioning your ship's propellers increases its speed, performance, and fuel efficiency. Our cleaning specialists can ensure the highest quality finish (Rupert Scale "A" grade) to your ship's propellers and marine machinery.

We provide a wide range of underwater repair services, including but not limited to:

- Welding of cracks
- Propeller and rudder repairs
- Blanking of overboard valves
- Seachest blanking
- Bilge keel cropping
- Welding of anodes
- Temporary installation of Cofferdams
- Sacrificial and impressed current anode replacement
- Emergency Repair
